

CHILD'S PLAY

Physical therapy for the child

MIGLIKTUK

Occupational Therapy for the child

NAME: JACOB

DIAGNOSIS: SENSR INTEGRATION

AGE: 8

Jacob has been seen for OT for 8 months. He was initially seen for difficulties with fine motor skills, poor strength decreased overall coordination. Jacob has few friends and was never able to succeed in sports. He did not like to touch many objects and was very stiff in his movements.

Jacob uses the Eqipony to work on overall strength, balance and coordination. His muscle tone has shown great improvement. He is able to ride for up to 4 minutes at a trot with his hands on his hips for an added challenge. Jacob also works on grooming the Eqipony for tactile exposure, which at first was very hard for him to do; now he does it with ease.

Jacob has been riding with Rainbow Connection for 4 months. Since that time he has made several friends. Participates in grooming and is learning how to participate in a posting trot with moderate assistance.

Jacob working on muscle strength, coordination and motor planning.
